Languages: Python, JavaScript, C/C++, SQL, Rust, TypeScript, Ruby, Go, Java, HTML/CSS, Scala, Assembly
Technologies: AWS (Lambda/DynamoDB/S3), React, Node, Flask, Express, Axios, Git, Unix, Rails, Protobuf

Education

University of Waterloo **Sep. 2022 – Apr. 2027**
Bachelor of Software Engineering, Honours (BSE) *Waterloo, Canada*

- **cGPA: 92% (4.0)**
- Relevant courses: Algorithms, Data Structures, Distributed Systems, Databases, OOP, OS, Networks, Concurrency

Technical University of Denmark (DTU) **Sep. 2025 – Dec. 2025**
Exchange Student, Computer Science *Copenhagen, Denmark*

Experience

Cloudflare **May 2026 – Aug. 2026**
Software Engineer Intern *Austin, Texas*

- Helped launch **Cloudflare OS**, an open-source agent platform that has since reached **12,000 GitHub stars**
- Developed an **agent harness** that enabled AI agents to safely execute tool calls and interact with external systems
- Developed a chatbot platform for teams to deploy agents that answer questions and autonomously resolve alerts

Aven Financial **Jan. 2026 – Apr. 2026**
Software Engineer Intern *San Francisco, California*

- Worked **12-hour days** at a **$2.2B** fintech startup, building home-equity-backed credit cards to lower borrowing costs
- Launched a debit card and checking account to expand customer base, scaling balances to **$500,000** in the **first month**

Shopify **May 2025 – Aug. 2025**
Software Engineer Intern *Toronto, Canada*

- Built **Ruby** ads billing systems processing **$500,000/day** and wrote **10,000 lines** of production code in 4 months
- Contributed to major **ads billing migration** consolidating merchant payment flows for the **Shop app**

Bank of America **Sep. 2024 – Dec. 2024**
Software Engineer Intern *Toronto, Canada*

- Worked on a prime brokerage margin engine to calculate risk metrics of **2.3 million** securities per day in **Python**
- Gained exposure to **financial markets**, option pricing, Greeks, and derivative structures across asset classes
- Engineered a streaming architecture migration using **pub-sub** messaging queues to improve platform resiliency

Research

Formal Verification of the Rust Standard Library **Sep. 2026 – Present**
Undergraduate Research Assistant – supervised by Dr. Patrick Lam

- Contributing to an **AWS-backed effort** to verify memory safety and correctness of the **Rust standard library**

Fun Fact

I spent last fall on exchange in Copenhagen studying at **DTU** and visited 12 countries while living abroad
